Subject: RIO MESA SOLAR ELECTRIC GENERATING FACILITY, STAFF'S DATA ADEQUACY RECOMMENDATION (11-AFC-4)

DOCKET	
11-AFC-4	
DATE	NOV 08 2011
RECD.	NOV 08 2011

On October 14, 2011, BrightSource Energy, Inc., submitted an Application for Certification (AFC) to construct and operate the Rio Mesa Solar Electric Generating Facility (Rio Mesa SEGF). The Rio Mesa SEGF site is located on the Palo Verde Mesa in Riverside County, California, approximately 13 miles southwest of the City of Blythe.

The proposed Rio Mesa SEGF (Project) would comprise three solar fields and a common area with shared facilities encompassing a total of approximately 5,750 acres. The southern solar field would be located on privately owned land on approximately 1,800 acres and the middle solar field would be located on mostly privately owned land on approximately 1,940 acres, with a small portion located on Federal land administered by the Bureau of Land Management (BLM). The third solar field, approximately 1,800 acres in size and located in the northern portion of the project, is mostly on BLM land, with a small portion on private lands. A separate Right of Way grant must be approved by the BLM for that portion of the project located on BLM land. Each solar plant would generate approximately 250 megawatts (MW), for a total net output of 750 MW and would use heliostats – elevated mirrors guided by a tracking system mounted on a pylon – to focus the sun's rays on a receiver located atop a 750-foot tall solar power tower near the center of each solar field. Each solar plant would utilize approximately 85,000 heliostats.

The shared facilities located in the common area located east of the plant sites would include administration, control, maintenance, and warehouse buildings; a heliostat assembly building, evaporation ponds, groundwater wells, a water treatment plant, construction laydown and parking areas, mobile equipment maintenance facilities and a natural gas tap and meter station.

The Rio Mesa SEGF will be interconnected to the Southern California Edison (SCE) grid through upgrades to SCE's 220 kilovolt (kV) line passing north of the site known as the Palo Verde-Devers Line. The upgrades will include construction by SCE of a new 220/ 500 kV substation adjacent to the Palo Verde-Devers line to be designated as the Colorado River Substation. This new substation and the 220 kV upgrades will be for the benefit of the Rio Mesa SEGF project and other interconnection customers in the region.

Staff has completed its data adequacy review of the AFC and has determined that it does not meet all the requirements listed in Title 20 California Code of Regulations,

section 1704, Appendix B (2007) for the 12-month process. Of the 23 technical disciplines reviewed, we believe the information contained in the AFC is deficient in five areas which are: Air Quality, Biological Resources, Cultural Resources, Water Resources, and Project Overview. Therefore, we recommend that the Energy Commission find the AFC incomplete and adopt the attached list of deficiencies.

Attached is a summary table and data adequacy worksheets for all technical disciplines. The worksheets for the aforementioned sections identify the additional information that we believe is necessary to complete the AFC in accordance with our regulations. At the Energy Commission's business meeting on November 16, 2011, I will recommend that the Energy Commission adopt the list of deficiencies and not accept the AFC as complete until the additional information specified in the data adequacy worksheets is supplied. If you have any questions, please call Pierre Martinez, staff's Project Manager, at (916) 651-3765.

Appendix B (g) (4) (B)	A description of the ambient noise levels at those sites identified under subsection (g)(4)(A) which the applicant believes provide a representative characterization of the ambient noise levels in the project vicinity, and a discussion of the general atmospheric conditions, including temperature, humidity, and the presence of wind and rain at the time of the measurements. The existing noise levels shall be determined by taking noise measurements for a minimum of 25 consecutive hours at a minimum of one site. Other sites may be monitored for a lesser duration at the applicant's discretion, preferably during the same 25-hour period. The results of the noise level measurements shall be reported as hourly averages in Leq (equivalent sound or noise level), Ldn (day-night sound or noise level) or CNEL (Community Noise Equivalent Level) in units of dBA. The L10, L50, and L90 values (noise levels exceeded 10 percent, 50 percent, and 90 percent of the time, respectively) shall also be reported in units of dBA.	§ 5.7.4.2	Yes

Appendix B (g) (6) (B)	An assessment of the visual quality of those areas that would be affected by the proposed project. For projects proposed to be located within the coastal zone, the assessment should also describe how the proposed project would be sited to protect views to and along the ocean and scenic coastal areas, would minimize the alteration of natural land forms, would be visually compatible with the character of surrounding areas.	Section 5.13.3.6 describes scenic quality, pp. 5.13-17 to 5.13-19; Section 5.13.3.9 – Key Observation Points (KOPs), pp. 5.13-21 to 5.13-25 include discussions of scenic attractiveness/quality for the KOPs.	Yes	
Appendix B (g) (6) (C)	In consultation with Energy Commission staff, identify: i) any designated scenic roadways or scenic corridors and any visually sensitive areas that would be affected by the proposed project, including recreational and residential areas; and ii) the locations of the key observation points to represent the most critical viewing locations from which to conduct detailed analyses of the visual impacts of the proposed project. Indicate the approximate number of people using each of these sensitive areas and the estimated number of residences with views of the project. Also identify any major public roadways and trails of local importance that would be visually impacted by the project and indicate the types of travelers (e.g., local residents, recreationists, workers, commuters, etc.) and the approximate number of vehicles, bicyclists, and/or hikers per day.	Bradshaw Trail, a federally-designated "Backcountry Byway," is discussed at the bottom of p. 5.13-5. The portion of Interstate-10 that is eligible for designation as a state scenic highway is discussed on p. 5.13-7. Figure 5.13-6 (Landscape Character Photograph 3) was included to show a view from the Bradshaw Trail. Section 5.13.3.4 – Landscape Character of the Area, pp. 5.13-15 & 5.13.16 discuss landscape character photographs, including photographs taken from sensitive viewing areas. Section 5.13.3.9 – Key Observation Points, pp. 5.13-21 to 5.13-25, characterizes viewers and critical viewing locations for the six KOPs.	Yes

Table 5.13-4 on pp. 5.13-11 to 5.13-13. The transmission line is briefly mentioned on p. 5.13-15. It is mentioned on pp. 5.13-14, 5.13-30, 5.3-31 that project structures will be painted in muted tones.	Yes	
Appendix B (g) (6) (E)	Provide the cooling tower and heat recovery steam generator (HRSG) exhaust design parameters that affect visible plume formation. For the cooling tower, data shall include heat rejection rate, exhaust temperature, exhaust mass flow rate, liquid to gas mass flow ratio, and, if the tower is plume-abated, moisture content (percent by weight) or plume-abated fogging curve(s). The parameters shall account for a range of ambient conditions (temperature and relative humidity) and proposed operating scenarios, such as duct firing and shutting down individual cells. For the heat recovery steam generator exhausts, data shall include moisture content (percent by weight), exhaust mass flow rate, and exhaust temperature. The parameters must correspond to full-load operating conditions at specified ambient conditions, and shall account for proposed operating scenarios, such as power augmentation (i.e., evaporative coolers, inlet foggers, or steam injection) and duct firing, or proposed HRSG visible plume abatement, such as the use of an economizer bypass. For simple-cycle projects, provide analogous data for the exhaust stack(s).	Section 5.13.4.3, p. 5.13-31, includes a discussion of cooling and water vapor plumes and describes how visible plumes will not be an issue for the project.	Yes

Photographs showing existing conditions and visual simulations from the key observation points are shown on Figures 5.13-14a through 5.13-19b.	Yes	
Appendix B (g) (6) (G)	An assessment of the visual impacts of the project, including light, glare, and any modeling of visible plumes. Include a description of the method and identify any computer model used to assess the impacts. Provide an estimate of the expected frequency and dimensions (height, length, and width) of the visible cooling tower and/or exhaust stack plumes. Provide the supporting assumptions, meteorological data, operating parameters, and calculations used.	Section 5.13.4.2, Assessment of Visual Effects, and Section 5.13.4.3, Individual Project Feature Impacts, discuss the potential effects of the project on visual resources (pp. 5.13-26 to 5.13-32). No equipment is being proposed that could cause visible water vapor plumes.	Yes	
Appendix B (g) (6) (H)	If any landscaping is proposed to reduce the visual impacts of the project, provide a conceptual landscaping plan at a 1:40 scale (1"=40'). Include information on the type of plant species proposed, their size, quantity, and spacing at planting, expected heights at 5 years and maturity, and expected growth rates.	Section 5.13.4.3 – Individual Project Feature Impacts, on p. 5.13-31 there is a mention of "landscape areas" in the proposed common area; on page 5.13-32 it is stated that a landscaping plan will not be prepared for the project. Appendix B (g) (14) (C) (viii)	For all projects which have a discharge, provide a copy of the will-serve letter, permit or contract with the public or private entity that will be accepting the wastewater and contact storm water from the project. The letter, permit or contract, if possible, shall identify the discharge volumes and the chemical or physical characteristics under which the wastewater and contact storm water will be accepted. In the event that a will-serve letter, permit, or contract cannot be provided, identify the most likely wastewater/storm water entity and discuss why the applicant was unable to secure the necessary assurances to serve the project's wastewater/storm water needs. Also, discuss the term of the wastewater service to the project, whether the wastewater entity has adequate permit capacity for the volume of wastewater from the project and has adequate permit levels for the chemical/physical characteristics of the project's wastewater and storm water for the life of the project, and any issues or conditions/restrictions the wastewater entity may impose on the project.
